

CUTTING OF PID'S FILM COPY

File

1. Full frames of a mission may be cut from a roll and the frame must remain intact until one week prior to the return of the mission to the film file.
 2. A record of the Mission/Pass/and Frame number must be kept and signed for by the person obtaining the film. (Record to be kept in Support Staff/PID).
 3. Frames of primary targets will go to the branch having the major interest. In cases where two or more branches have targets of equal priority, there will be free exchange of the material with the original procurer responsible for its safekeeping.
 4. Frames retained by the PI's for current work must be handled with care at all times to prevent scratching or bending.
 5. Splicing of the film roll will be accomplished with opaque pressure sensitive tape.
-
6. One week prior to the return of the mission to the film file the material will be available for the cutting of film chips for stereograms and frames for retention. (2, 3, 4, and 5 above will apply at this time also.)
 7. Frames containing a number of installations in a limited area will be cut so as to include the total complex in order that areas of interest to several branches will not become disjointed. (Example: an airfield, AE installation, and missile production facility.
 8. PI's retaining full frames or stereogram chips will be responsible for the certification of its eventual destruction.
